Technology to speed service at airport valet

PARKING • Park2Go, Calgary's only off-site valet parking and shuttle service, is the first Canadian company to install the AVPM technology to improve service.

Park2Go is using the U.S.-based AVPM valet parking system, which tracks, monitors, controls and manages everything from valet keys and vehicles through to tickets and employees.

The technology is part of a system upgrade that gives Park2Go a competitive advantage, says general manager George Garcia.

"Our online reservations system . . . means faster, hassle-free check-ins," he said.

Park2Go, which boasts a nine-minute trip to the airport, says speed of service is critical.

The new technology also helps to provide protection against employee clerical and operational errors and fraudulent damage claims.
